

## Nuplas Plastic Bee Hive Assembly Instructions

**Step 1:** Take the Base Board and flip it upside down, locate the two cavities in the 'feet' and clip the 2 x Foot Plate's into place. Take the hinged door and slot it into the small round hole near the entrance. Your base and lid are ready to go.

Your half way there..

**Step 2:** Take 2 x Box Ends and the 2 x Box Sides and interlock them together using the Mortise & Tenon join. Turn the box on its side making sure it is square and pre drill through the guide holes with a 2.5-3mm drill bit. Take the 12 screws supplied, go ahead and screw the box together. The box is ready to go.

### Tips:

- There is allocation for ID marking on the Box End.
- The handles are easiest lifted by grabbing under the scalloped handle rather than inside the scalloped handle, when lifting by hand.
- Spring clips are a great way to hold the boxes together and screwing the brood box to the base holds it firmly in place.
- Lifting cleats can make for easier handling of boxes by hand and also aid in securing boxes from slipping. Note: spring clips and lifting cleats cannot be used together.
- The door closure is easily removed and put away safely in a tool box when not needed.

### Lid – No Assembly Required
